

MICHAL UHRIN

AI integration and business applications

CAPABILITY PROFILE

HALIF HATCH / WORKBENCH

I build software that connects AI models, business data and existing systems. I bring hands-on development and test automation experience, with direct responsibility for implementation and a focus on how the solution behaves in real use.

DELIVERY CAPABILITIES

Backend services and APIs
AI model integration
Semantic search
Business workflow automation
Application and system testing

CORE TECHNOLOGIES

Python / FastAPI
C# / .NET
JavaScript / TypeScript
AngularJS
SQL / PostgreSQL
Docker / Git
WooCommerce

EDUCATION

Bachelor's and Master's

Applied Informatics
Comenius University
Faculty of Mathematics,
Physics and Informatics

WORKING MODEL

Independent developer
Slovakia

Seeking a customer-led project
and a long-term commercial
partnership.

SELECTED PROJECTS

01 SalesLoop

AI integration and e-commerce automation

Built a WooCommerce integration and Python/FastAPI backend combining external AI models with embedding-based semantic search over database content. The system covers product synchronisation, recommendation displays, cart actions, event tracking and reporting.

Relevant to Hatch: connecting model calls and retrieved context to application workflows and business systems.

02 Cenorama

Quotation software for an engineering business

Developed an application for preparing price quotations for a small engineering company, translating a specific business process into a working software tool.

03 DHZ PWA

Progressive web application and biometrics prototype

Completed the core PWA application. A behavioural biometrics component exploring typing and swipe patterns is still under development.

PROFESSIONAL BACKGROUND

Software Engineer | TranscendTech

2023 - present

Business application logic, backend services, data workflows and maintenance.

Automation Tester | Slovenská sporiteľňa

2021 - 2024

Enterprise test automation and system-level testing.

WORKBENCH FOCUS

 Agentic AI for Operations

Start with one client workflow, integrate the required systems, and evaluate correct task completion, failure handling and human handover.
